

Paddock Advisory Service

1. Assessment

- A site visit will be arranged to assess the condition of the paddock, taking into account the current grazing intensity, compaction issues, conduct a soil type evaluation and identify any weeds which are competing with the grass.

2. Soil Test

- A standard soil test will be carried out testing the pH, P, K and Mg of the soil in a standard 'W' pattern across your fields.

3. Herbicides

- Any weeds that have been identified from the initial visit can be dealt with by us recommending the appropriate herbicide. If desired, we can also supply the recommended herbicide(s) with appropriate rates and advice - please enquire for prices if this service is required

4. Management Suite

- We will create customised management plans and recommendations to improve the current fertiliser practise aiming to improve efficiency of fertiliser use through effectively managing fertiliser, manure and lime applications.
- *This will enable our experts to tailor a fertiliser programme to suit your grazing system increasing the productivity of your grazing system.*
- Tailored practical solutions will be provided that have been constructed from the soil health reports and through the agronomist knowledge to maintain and enhance soil health through personalised recommendations and precise practical solutions to suit each clients individual requirements to alleviate and rectify any problems which have been identified in the soils.

5. Additional services

- Tissue testing can be done to ensure the current fertiliser recommendations match the leys requirements.
